

A web-based information management tool for documenting and reporting on stakeholder interactions quickly and easily.

Consultation Manager is a powerful Web-based software tool that helps public involvement team members stay on top of their projects and sets the standard for stakeholder engagement management.

Whether you're consulting the public on a small streetscape or stakeholders on a major transportation project, obtaining landowner's approval to drill oil wells or consulting Aboriginal groups on land use, *accurate, reliable and well documented records of these interactions need to be maintained.*

www.sustainet.com

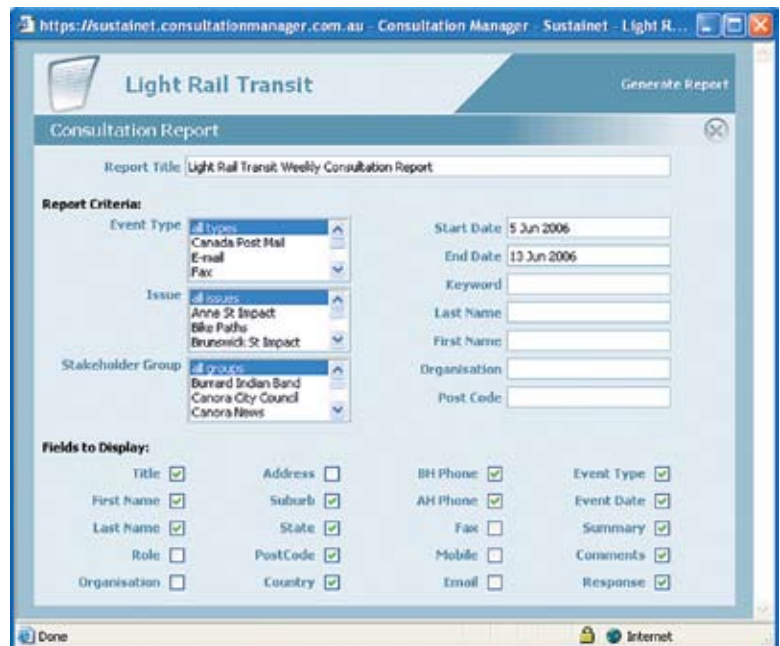

Consultation Manager will enable you to:

- Manage one or many small and large public consultation projects simultaneously and with ease
- Retain all gathered information in a single accessible database
- Share information and collaborate with geographically dispersed teams
- Record stakeholder interactions and issues
- Analyze large volumes of stakeholder interactions
- Facilitate communication and feedback with stakeholders
- Generate powerful reports on the outcomes of your consultations
- Improve accountability, transparency and generate audit trails

Streamlined and efficient data entry system: Reduce the time and cost involved in managing complex datasets.

Powerful search functions: Drill down to individual stakeholders in seconds and display the history of their interaction with your projects.

So, whether you're a small consultation practice collaborating with a number of groups on a single consultation project, or a large multi-departmental organization that carries out a number of consultations, *Consultation Manager* will work for you!

The screenshot shows a web browser window with the URL <https://sustainet.consultationmanager.com.au>. The page title is "Light Rail Transit" and the main heading is "Consultation Report". The form includes the following fields and options:

- Fields to Display:**
 - Title Address BH Phone Event Type
 - First Name Suburb AH Phone Event Date
 - Last Name State Fax Summary
 - Role PostCode Mobile Comments
 - Organisation Country Email Response

Find out about how our software can assist you to better manage information when tackling your next Stakeholder Engagement or Public Consultation project.

Collaborate with geographically dispersed teams

Share information securely between your project offices, as well as external teams no matter where they are, enabling unprecedented collaboration between unlimited, simultaneous users. Assigned permissions control what each team member can see and do with your data.

Plan your Consultations

Planning and calendaring functionality allows team members to see what consultation events have been scheduled for when, and can quickly click on them to access their details.

Facilitate communication with stakeholders

Powerful mailing list features enable one-click generation of mail merges, phone and email lists for all stakeholders or for specific stakeholder groups.

Improve accountability and generate audit trails

Assign actions to project team members and monitor their progress. Team members have their own task lists, and email alerts can be sent instantly. Project Managers can oversee all tasks to stay fully informed of their progress.

Generate powerful reports in real-time

Instantly generate customizable reports on your projects. Reports can summarize stakeholder interactions by stakeholder group or consultation issue or drill down to individual interactions. At your discretion, reports can also be made available to clients and key reference groups to enhance the transparency of your process.

Visualize stakeholder information on maps:

Consultation Manager's dataset has been designed to be GIS-Compatible, meaning that your project team will be able to generate maps showing the distribution of key issues and other stakeholder information in your area of interest.

Software Deployment

Consultation Manager may be **branded** to suit your corporate identity to position yourself as a leader in the Community Engagement field, and deployed in various licensing & pricing options to suite your budgets and organisational structure:

- **Hosted Application:** The software is installed on our secure servers and does not require any software installation on your network.
- **Licensed Software:** The *Enterprise version* of the software is licensed and installed on your own corporate network.
