SustaiNet SOFTWARE
Stakeholder Information Management Solutions

Experience the power and convenience of adding & viewing stakeholder communications as well as updating stakeholder records from your mobile device - while in the field.
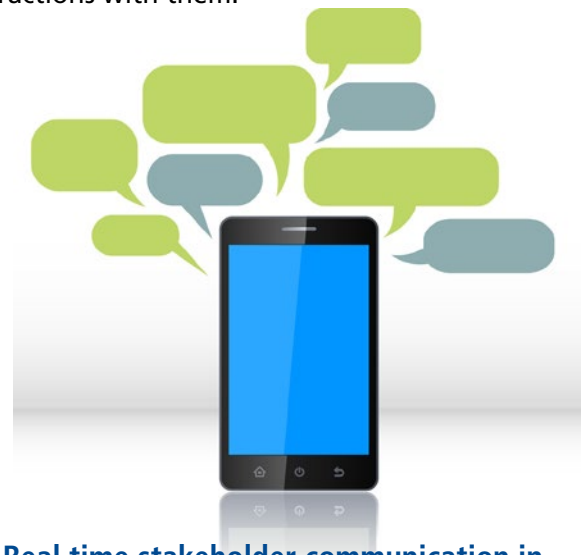

The power of anytime, anywhere data accessibility makes mobile technology an essential tool to use as part of your organization's stakeholder communication and management program. Fast and reliable entering and access to important information makes it convenient for field staff to stay connected with all of their stakeholders, as well as recording those important interactions with them.

Secure, real time stakeholder communication

As stakeholder engagement becomes more integrated into day-to-day business operations, the demands of individuals, groups and governments have increased.

By combining the benefits of StakeTracker with the power of mobile technology, your organization now has the ability to quickly access and manage critical information, in turn, helping your consultation team exceed stakeholder expectations.

Security concerns for users in the field or the organization are eliminated as our *enterprise-grade encryption and user authentication will assure that all data is safe and privacy concerns are met.*

Real time stakeholder communication in the field is becoming the expected norm

Packed with features

StakeTracker Mobile is purpose-designed for smart phones, rather than just accessing browser-based software via a smart phone – there is a difference!

SustaiNet's StakeTracker Mobile application offers stakeholder consultation professionals a robust set of features that are easy-to-use across a number of different hand held platforms.

From communication and issues management to maps and directions, the StakeTracker Mobile app empowers your field based teams to easily and securely manage stakeholder communications on the go.

SustaiNet® SOFTWARE

Find out about how our mobile app can assist you to better manage your stakeholder communications at **www.sustainet.com**

Android	Android 4.0 ("Ice Cream Sandwich") or later.	Many Android handsets to choose from, by Samsung, HTC, LG, Motorola, and others.
Apple	Apple iOS 5.1.1 or later.	iPhone 3, 4, 5 and 6. iPod Touch 3rd
Blackberry	Blackberry 10 or later.	Blackberry Q10, Z10, Z30

The ability to interact with an organization in the field raises the likelihood that stakeholders will respect your team's consultation efforts and possibly be more receptive to, and understanding of your project and how it is being managed.

Create a positive consultation experience

StakeTracker Mobile can potentially improve your organization's relationship with its stakeholders and increase the level and quality of interactions with stakeholders by:

- adding comments and concerns while in the field.

- offering up timely access to information when it comes to referencing previous interactions and key project information during on-site consultations.

Designed for the field

StakeTracker Mobile is purpose built for consultation professionals working in the field.

Your remote teams will always be prepared for every consultation by having all the information they need at their fingertips. Consultation staff will be able to cross reference all previous communications with stakeholders; every topic, comments or issue raised; and a complete list of consultation events that individual team members were involved in.

GIS Enabled: The application clearly displays stakeholder addresses on a map, and uses a mobile device's GPS service to provide driving directions. In addition, users can email and phone stakeholders and other team members directly from StakeTracker Mobile.

KEY FEATURES

- Add events, communications and stakeholders.

- Transcribe your spoken notes to text, to reduce your typing, by using your phone's speech-recognition feature.

- Update stakeholder contact details right then and there.

- Quickly contact stakeholders. Phone or email them directly from StakeTracker Mobile.

- Save partially entered items as drafts for completion at a later time.

- Look up other information in StakeTracker while entering a communication, or when interrupted by a phone call, and then return to your draft.

- Look up topics, concerns, and issues—and see which stakeholders voiced them.

- Look up events and campaigns, to see who participated and which topics were raised.

- Look up core records: stakeholder groups, stakeholder individuals, contacts, land interests, and land parcels.

- Get driving directions to a stakeholder's address via your GPS-enabled phone.

- View the location of land parcels or stakeholder addresses on a map.
